fault-tolerant VD1: VD2:	
accelerate VD1: The controller uses a cache in an attempt to accelerate read and write accesses to the server. VD2:	
Incidentally VD1: VD2:	
permanently VD1: VD2:	
ideally VD1: The write cache should have a battery backup and ideally be mirrored VD2:	
mirrored VD1: The write cache should have a battery backup and ideally be mirrored VD2:	
survive VD1: The battery backup is necessary to allow the data in the write cache to survive a power cut. VD2:	
batch VD1: Many applications do not write data at a continuous rate, but in batches VD2:	

extrapolate VD1: Consequently, the controller can only analyse past data access and use this to extrapolate which data blocks the server will access next VD2:	
in comparison to VD1: The acceleration of read operations is difficult in comparison to the acceleration of write operations using cache VD2:	
comparatively VD1: VD2:	
comparatively VD1: this prediction is comparatively simple VD2:	
fool VD1: Virtual copying means that disk subsystems fool the attached servers into believing that VD2:	
favourable VD1: However, it is not possible to choose the most favourable implementation VD2:	
permanently VD1: At one extreme the data is permanently mirrored (RAID 1 or RAID 10). VD2:	
adapter VD1: HBA VD2:	
replication VD1: Replication is the ability to guarantee the consistent of the data VD2:
